

2 Legs EA Projects

Simple Setup

Point 1 - Pullback recognize

Define a pullback(BC)

Point 1 B to C Pattern recognition:

Recognize Example1,2,3,4. And exclude Example 5.

B to C at least 7 bars and less than or equal to 20 bars

Use Frame to show the recognized pullback at strategy Tester

**Example 1
(good)**

**Example 3
(good)**

**Example 5
(not good)**

**Example 2
(good)**

**Example 4
(good)**

Define a pullback(BC)

For going up market:

- if (H2 is higher than H1 AND L2 lower than L1) = ignore this order (Exmple 5)
- number of bars of between H1 to L2 (including H1 and L2 itselfs), must be 7 to 20 bars(too few or too long pullback will be skipped).
- use ATR rate to detect the height of BC. Add a input value(s), to let user to adjust the min. and max. value to trigger the order.

**Example 1
(good)**

**Example 2
(good)**

**Example 3
(good)**

**Example 4
(good)**

**Example 5
(not good)**

Point 2 - Trend

Define a trend(AB)

After recognized the pull back pattern, then use ADX indicator to define the trend. (**the sequence must be recognize the pullback pattern first, and then check the ADX indicator.**)

Add input value(s) to let user adjust the value(s) the min. and max. level in order to trigger the order.

Point 3 - Order Entry

Make order

For going up market:

Please place a buy order when the price is higher then H2.

**Example 1
(good)**

**Example 3
(good)**

**Example 2
(good)**

**Example 4
(good)**

Point 4 - Order Entry Mode

Order Entry Mode:

For going up market:

Use pull down menu and let user to choose which method to entry the order:

- **Market Order**
- **Close Next Bar Entry (after trigger the place order command, then place the order, if any next bar closed and the closed price is higher than the trigger price)**
- **Full Next Bar Entry (after trigger the place order command, then the place order, if any next bar closed and open&high&low&close are higher than the trigger price)**

Point 5 - Order Lots

Order Lot:

Use pull down menu and let user to choose which LOT method to entry the order:

- **Fix Lot**
- **Fix Risk Amount (Lost money amount when hit SL is equal to this money value)**
- **Fix Percentage Risk (Lost money amount when hit SL is equal to this percentage of the existing amount in the pool)**

Let user input a value for above choice.

Point 6 - Stop Loss

Stop Loss:

Use pull down menu and let user to choose which Stop Loss method:

- **Ratio of BC height (if user input 1, SL value is same as height of BC height.**
 - **For example: if input = 0.5, then SL is 50% of BC height**
 - **For example: if input = 2, then SL is 2 x BC height**
- **ATR Rate (use ATR rate value, then user to input and adjust the SL distance)**
 - **For example: user may input 0.5, 1, 2 ...**

Let user input a value for above choice.

Point 7 - Take Profit

Take Profit:

Use pull down menu and let user to choose which Take Profit method:

- **TP SL Ratio:** TP base of SL distance. If user input 1, then TP is equal to SL distance
 - For example: If user input 0.5, then TP is half of SL distance
 - For example: If user input 2, then TP is 2 x SL distance
- **TP BC Ratio:** TP base of BC height. If user input 1, then TP is equal to BC height
 - For example: If user input 0.5, then TP is half of BC height
 - For example: If user input 2, then TP is 2 x SL BC height

Let user input a value for above choice.

Point 8 - Leave Mode before TP

Leave Mode before TP:

If Market going up

Use pull down menu and let user to choose which Leave Mode method:

- **NONE:**
- **Breakeven Ratio:** if price reached “Breakeven Touch ratio”, if price going down to “Breakeven Leave ratio”, then exit the order.
- **2LOW:** if price reached “Breakeven Touch ratio”, if price going down, when the price is lower then previous 2 bars Low, then exit the order.

Breakeven Touch ratio (TP distance ratio: 0.5 = 50%)

Breakeven Leave ratio (TP distance ratio: 0.5 = 50%)

- **For this project document, example just use one direction for explanation. This project need to write both direction (buy and sell) logic base on the explanation.**
- **This project need to include the source code**
- **Source code need clear remark for each function**
- **This EA can work normally with one account with multiple EA. (need to add user input value for magic number)**
- **Bugs maintainance 7 days after payment completed. (Bugs issue ONLY)**
